DBAR: Digital Belt and Road Program

— Big Earth Data for SDGs in the Region

Huadong Guo

7 December 2021 Helsinki, Finland

The Belt and Road region covers a **vast area** and involves a **large population**, facing numerous challenges related to **sustainable development**.

10-Member Group 2016-2017

2018-2019

Dr. Paulo Gadelha (Brazil), Coordinator of the FIOCRUZ Strategy for the 2030 Agenda, Oswaldo Cruz Foundation (FIOCRUZ)

Prof. Huadong Guo (China), Chairman of Academic Committee, Institute of Remote Sensing and Digital Earth, Chinese Academy of Sciences (CAS)

Dr. Heide Hackmann (South Africa), Executive Director, International Council for Science (ICSU)

Dr. Agnes Lawrence Kijazi (United Republic of Tanzania), Director General, Tanzania Meteorological Agency (TMA)

Dr. José Ramón López-Portillo Romano (Mexico), Chairman, Q Element Ltd.

Dr. Michiharu Nakamura (Japan), Senior Advisor (Former President), Japan Science and Technology Agency

Dr. Anne-Christine Ritschkoff (Finland), Senior Advisor VTT Technical Research Centre of Finland Ltd.

Dr. Špela Stres (Slovenia), Head of Innovation and Technology Transfer Center for Jožef Stefan Institute

Dr. Vaughan Turekian (USA), Senior Director at the National Academies of Sciences, Engineering, and Medicine

Dr. Ada Yonath (Israel), Director and Nobel Laureate, the Helen and Milton A. Kimmelman Center for Biomolecular Structure and Assembly of the Weizmann Institute of Science.

NATURE COMMENT: Steps to the Digital Silk Road

COMMENT

GEOLOGY Long line of triumph and failure — the hunt for Earth's magnetic heart **p.28**

NEUROSCIENCE Antonio Damasio's argument for emotions, appraised **p.30**

PUBLIC HEALTH Study the risk of yellow fever in Asia-Pacific **p.31**

PSYCHIATRY Pamela Sklar, pioneer of mental-health genomics, remembered **p.32**

Many developing countries, such as Mongolia, have rural economies, so projects that can provide farmers with up-to-date agricultural information are crucial.

Steps to the digital Silk Road

Sharing big data from satellite imagery and other Earth observations across Asia, the Middle East and east Africa is key to sustainability, urges **Guo Huadong**.

The ancient Silk Road trade routes connecting Asia, Europe and Africa lay behind the development of many great civilizations. Today, solar panels and smartphones have replaced silk, and trains and aeroplanes have superseded camels. But the Silk Road spirit of peace, mutual benefit and learning has been revived in an ambitious plan to bridge East and West, launched in 2013 by Chinese President Xi Jinping.

The 'Belt and Road' initiative promises more than US\$1 trillion of Chinese investment in some 60 countries (see 'Belt and Road'). All other nations are welcome to join in. The main aim is socio-economic development through improving the routes for land and sea trade. The initiative will also boost science and technology across the region, for example through research into artificial intelligence, nanotechnology,

quantum computing and smart cities (see go.nature.com/2myfec6).

But protecting the environment while supporting economic growth will be challenging. The Belt and Road region is home to more than 65% of the world's population. It includes 18 cities that have populations of greater than 10 million, such as Beijing, Cairo, Moscow, Manila and Istanbul.

Environments are diverse and fragile. ▶

◎ Enhance infrastructure

An open platform with shared data, codes and algorithms is urgently needed for analyzing the vast amounts of Earth-observation data, which are already daunting and will only increase.

◎ Promote data sharing and interoperability

Data need to be openly exchanged if everyone in the region is to benefit.

◎ Extend applications to more people

Development across the Belt and Road region is uneven. To close these gaps, it is necessary to improve common solutions provided by Big Earth Data.

◎ Identify research opportunities

Knowledge could be discovered within the huge multidisciplinary data sets.

◎ Strengthen international collaboration

Belt and Road nations should set up bilateral or multilateral arrangements and stronger links with international scientific programs and organizations.

SDGs of Interests

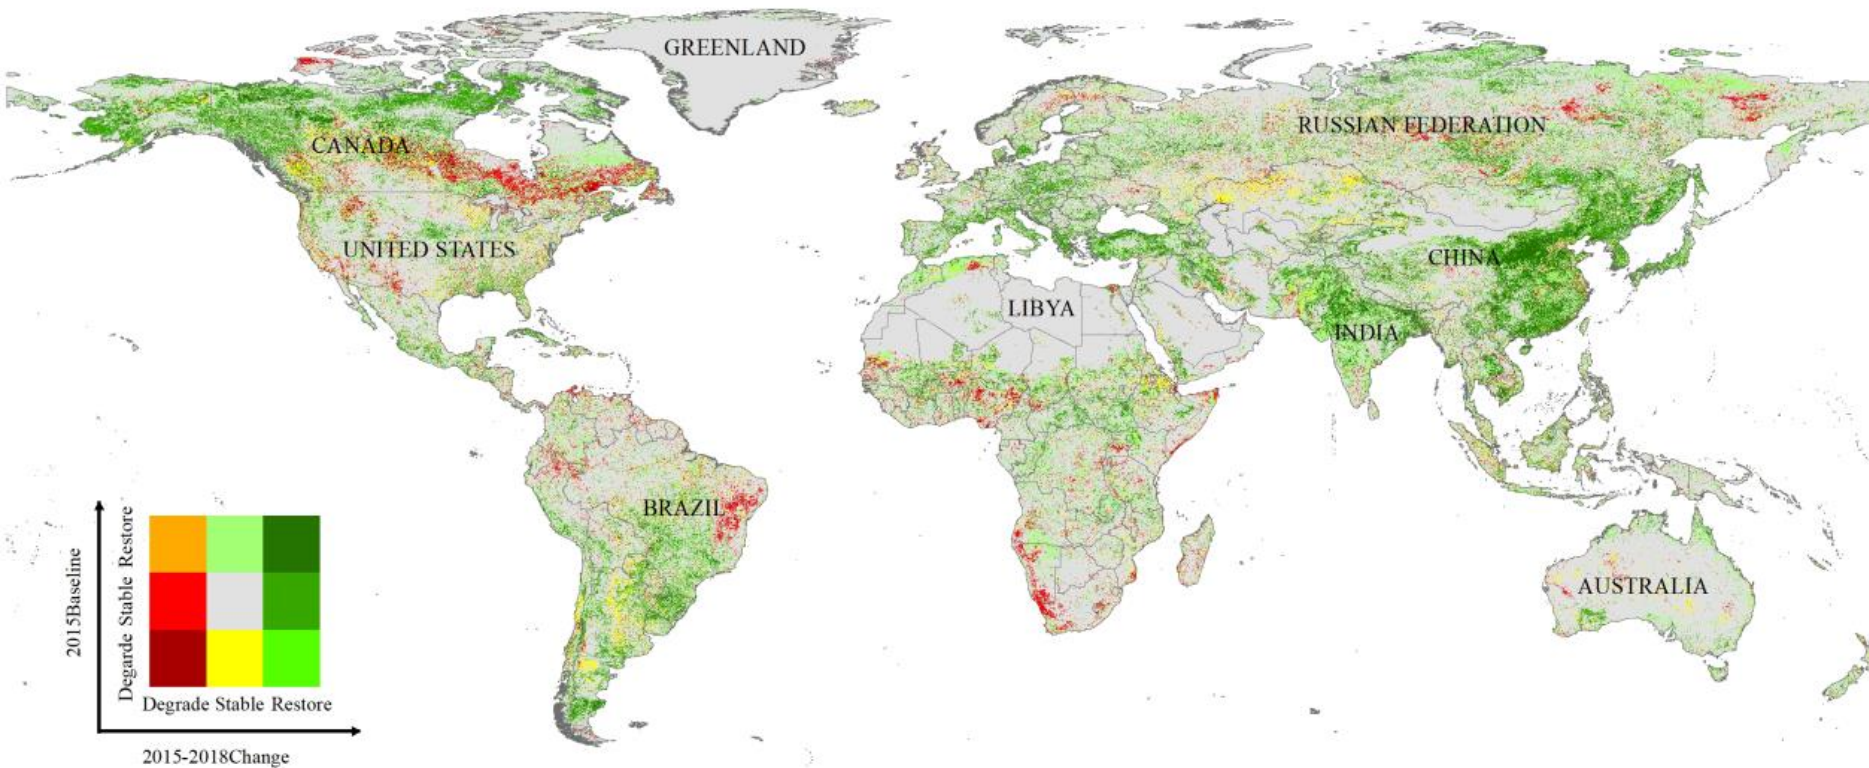

Support SDGs in three major ways:

- © Big Earth Data to fill in **missing data** and to provide new sources of data for evaluation.
- © Create **new methodologies** utilizing Big Earth Data technologies and models to evaluate SDGs
- © Develop **practice cases** of Big Earth Data for SDGs, and aids in monitoring the progress of SDG indicators.

Indicator evaluation for SDG 15

Global land degradation neutrality tracking

Spatial Distribution of Global Land Degradation Baselines and Dynamics

China's LDN status continues to improve. Compared with 2015, the net restored land area in 2018 increased by 60.30%, and the net restored land area accounted for about 1/5 of the world's total, making the largest contribution. From 2015 to 2018, land productivity showed significant decreasing trends in some regions.

Urban Sprawl and Urbanization

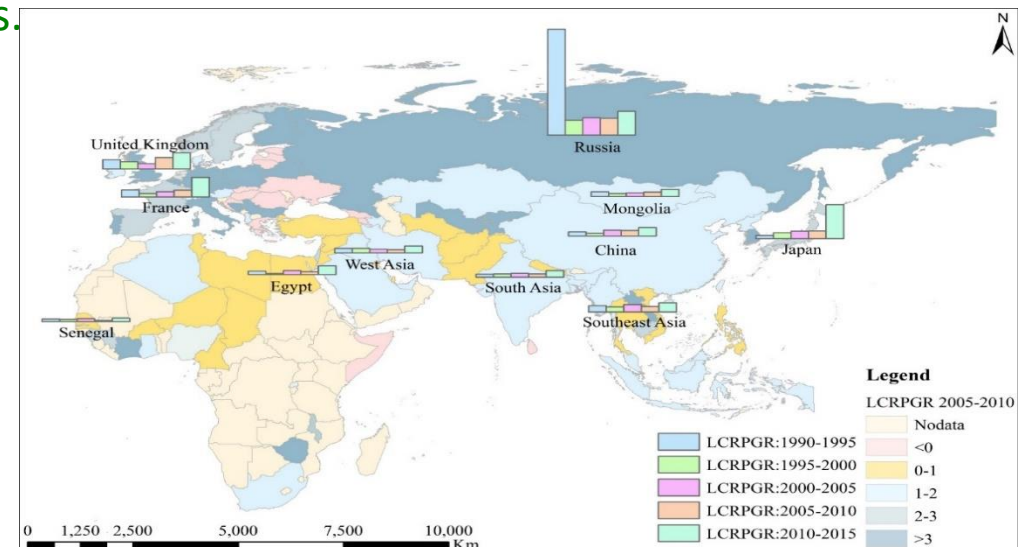

Monitoring and assessing urbanization progress in B&R region

- Monitoring and measuring the SDG 11.3.1 indicator for 1,500 cities with populations greater than 300,000 from 1990 to 2015 at 5-year intervals in the B&R region
- In the B&R region, the results reveal that LCRPGR increased from 1.24 in 1990-1995 to 2.67 in 2010-2015.
- Urban sustainability in B&R still faces major challenges.

Changes of LCR, PGR and LCRPGR in China

Big Earth Data in Support of SDGs

Chinese government released reports at the 74th and 75th UN GA
2021 report was released by Chinese State Councilor Wang Yi in September 2021

CASEarth: a Partner of UN Online Platform

A screenshot of the 2030 Connect website. The header is blue with the 'TECHNOLOGY FACILITATION MECHANISM' logo on the left and navigation links 'Compendium', '2020 Winners', 'COVID-19', 'About', and a 'Sign in' button on the right. The main content area is also blue and features the title '2030 CONNECT' with a UN SDG wheel icon, followed by the subtitle 'a United Nations online technology platform for the SDGs'. Below this is a search bar with the placeholder text 'Document or keyword' and a 'Search' button. A paragraph describes the platform as a dynamic new tool for entrepreneurs, innovators, students, and leaders. At the bottom, a row of 24 partner logos is displayed, with the CASEarth logo highlighted by a red rectangular box. The logos include CTCN, UNFCCC, OpenAIRE, UNU-MERIT, TT: CLEAR, WSIS STOCKTAKING, WORLD SCIENCE FORUM, UNTIL, UNOSSC, SOUTH-SOUTH WORLD, WIPO GREEN, WIPO Re:Search, esa, GLOBAL INNOVATION EXCHANGE, IAEA CONNECT, START-UP NATION CENTRAL, unite ideas, WIPO, Green Technology Bank, yet2, GSSD EXPO, The Innovation Policy Platform, and CASEarth.

CASEarth was adopted into 2030 Connect as one of the 24 partners, and one of 6 in the category of Publications and Knowledge Resources.

International Research Center of Big Data for SDGs

The sci-tech innovation and application of big data will help the international community to overcome difficulties and implement the UN 2030 Agenda globally.

-- President Xi's congratulatory letter

This Research Centre will work side-by-side with the Regional Hub for Big Data to support the UN Global Platform. Together, we can do more to end poverty, protect the planet and promote peace.

-- UN Secretary-General António Guterres' video message

International Forum on Big Data for
Sustainable Development Goals

Vision

The Center provides a range of services essential for **addressing** the most **challenging problems** such as **lack of data** and **technology barriers** in the implementation of the **SDGs**, including data sharing, technology solutions, decision-making support, as well as capacity building for developing countries.

We are committed to building the Center into **a public Big Earth Data S&T platform in service of the UN 2030 Agenda**, which will integrate scientific capacity training, with a goal to facilitate the progress of SDGs around the world.

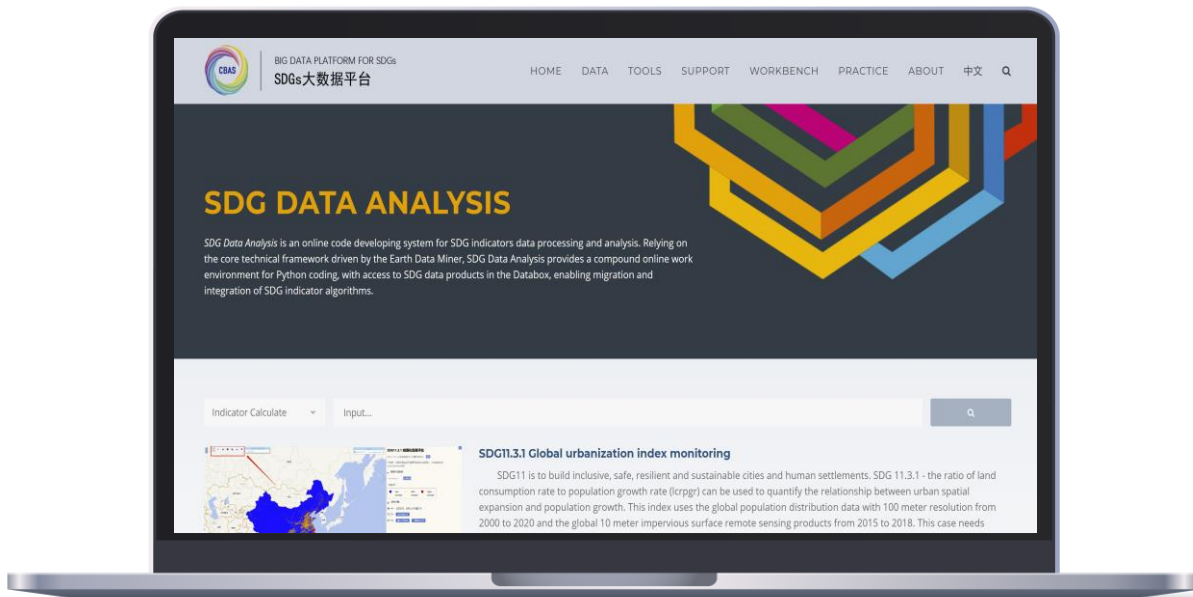

Collectively, CBAS will leverage the **Big Earth Data infrastructure, discipline-driving platform, and decision support system**, and pool strengths from relevant stakeholders, to build itself into an international research institution capable of all-round services for SDGs progress.

- Develop SDG **data infrastructure and information products**
- Provide new **knowledges** for SDG monitoring and evaluations
- Develop and launch **a series of SDG Satellites**
- Establish a **think tank** for STI to promote SDGs
- **Capacity development** for SDGs in developing countries

BRICS Forum on Big Data for Sustainable Development

Time: May 2022

Place: Beijing, China

Subject: Big Data Facilitating Sustainable Development

Proposed Themes:

1. Big Data in Support of End Poverty
2. Big Data in Support of Food Security
3. Big Data in Support of COVID-19 Prevention and Vaccine Accessibility
4. Big Data in Support of Climate Change Response and Disaster Risk Reduction
5. Big Data in Support of Sustainable Urban Development
6. Big Data in Support of Biodiversity Conservation

Expected Outcomes:

1. Establish exchange and liaison mechanism for BRICS and promote consensus on scientific and technological cooperation among BRICS on big data supporting sustainable development
2. Establish a data sharing portal for BRICS
3. Release SDG public data products for BRICS

Thanks
